Menu Algebra 2 / Trigonometry / Circular functions. The circle below is drawn in a coordinate system where the circle's center is at the origin and has a radius of 1. This circle is known as a unit circle. The x and y coordinates for each point along the circle may be ascertained by reading off the values on the x and y axes.

The graph of the equation $x^2 + y^2 = 1$ is a circle in the rectangular coordinate system. This graph is called the unit circle and has its center at the origin and has a radius of 1 unit. Trigonometric functions are defined so that their domains are sets of angles and their ranges are sets of real

numbers. Circular functions are defined such that their domains are sets of numbers that ...

Circular Functions - CliffsNotes

In this lesson you will view the trigonometric ratios of angles of rotation around the coordinate grid as a continuous, circular function. The connection will be made between how the ratios change as the angle of rotation increases or decreases, and how the graph of the function depicts that change.
