

**Css Resolution**

The logical NOT can be expressed through the 'not' keyword. The presence of the keyword 'not' at the beginning of the media query negates the result. I.e., if the media query had been true without the 'not' keyword it will become false, and vice versa. User agents that only support media types (as described in HTML4) will not recognize the 'not' keyword and the associated style ...

**Media Queries - w3.org**

All CSS properties also accept the CSS-wide keyword values as the sole component of their property value. For readability these are not listed explicitly in the property value syntax definitions. For example, the full value definition of border-color is <color>{1,4} | inherit | initial | unset (even though it is listed as <color>{1,4}). Note: This implies that, in general, combining these ...

High Screen Resolution Statistics. The tables below are a breakdown of "other high resolutions" from our Browser Display Statistics:

**High Screen Resolution Statistics - W3Schools**

Well organized and easy to understand Web building tutorials with lots of examples of how to use HTML, CSS, JavaScript, SQL, PHP, Python, Bootstrap, Java and XML.

**CSS border-width property - W3Schools**

<picture> is intended for when you actually need to swap in different pictures (not just different resolution) at different sizes. Examples: If you have a banner image that you want to fill the entire window, you might have very differently-cropped versions of the image in portrait and landscape mode.

Protecting Images - Put plain and simple: the only way to protect your images from being

downloaded or stolen off a web page is to not put them online in the first place. While I put this fact out there as blunt as possible, there are several techniques we can use to make website downloads and image theft much harder.

**Image Protection - How to Prevent Image Theft**

CSS Modal is built out of pure CSS. It is optimized for mobile and built using accessibility in mind.

**CSS Modal - Modals built out of pure CSS**

Less extends CSS with dynamic behavior such as variables, mixins, operations and functions. Less runs on both the server-side (with Node.js and Rhino) or client-side (modern browsers only).
